DETAILED ACTION

1. Claims 1-20 are examined on the merits.

2. The IDS, December 11, 2003, has been fully considered.

CLAIM REJECTIONS - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

- 4. Claims 14-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.
- 5. Claims 14-20 are directed to an article comprising a computer-readable signal-bearing medium such as "carrier signal" (claim 15). However, the carrier signal does not fall within any of the categories of patentable subject matter set forth in 35 U.S.C. 101.

 Therefore, claims 14-20, which embodies the carrier signal as the claimed invention, is not statutory.

CLAIM REJECTIONS - 35 U.S.C. § 112, SECOND PARAGRAPH

- 6. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 7. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 8. Claim 1, line 5-6, recites "invoking...in response to said interpretation" which causes said claim to be vague and indefinite because it is not clear as to whether the "invoking"

Application/Control Number: 10/733,559

Art Unit: 2168

is in response to the action of "interpreting" in step (b), or the interpreted command (result). For example as supported by dictionary.com, one interpretation is that the act of interpreting alone triggers the invoking step. Alternatively, the actual interpreted command (result of interpreting) triggers the invoking step. The same issue is present in claims 8 and 14. Claims 2-7, 9-13, and 15-20 are rejected for being dependent from claim 1, 8, or 14.

CLAIM REJECTIONS - 35 USC § 102

- 9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
 - A person shall be entitled to a patent unless -
 - (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 10. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Lennon et al. (US 20020107973A1) (Lennon hereafter).

CLAIM INTERPRETATIONS

11. It is noted that Lennon does not explicitly recite the limitation of "managed object." The instant specification exemplifies "managed object" as hardware devices which may include storage devices, servers, and routers (page 4, last paragraph). Lennon discloses the below cited method, computer system and article as directed to storage devices and severs (Figures 9-11). Therefore, the disclosure of Lennon has been interpreted as "managed object." Further, the disclosure of the "get" (page 5, column 1, [0074]) command by Lennon has been interpreted as a function as exemplified by the instant specification (page 6, lines 1-16).

Application/Control Number: 10/733,559

Art Unit: 2168

BASIS FOR PRIOR ART

12. In regard to claim 1, Lennon discloses a method of communicating with a managed object, comprising:

- a. Dynamically generating (page 4, column 2, [0073], especially the disclosure of "dynamically generating XML descriptions that conform to these schemas") an interpretable format form a meta data description for a function of said object (claim 1);
- b. Interpreting an operator input command (Abstract etc., and page 9, [0101]) according to said format (claim 92, and page 9, column 1, [0100], to page 10, column 1, line 7); and
- c. Invoking an appropriate action on said managed object in response to said interpretation (claim 92).
- 13. In regard to claim 2, Lennon discloses translating a response received from said managed object into said interpretable format (page 4, column 2, [0073], and page 5, column 1, [0077]).
- 14. In regard to claim 3, Lennon discloses meta data description for a function of said object includes a uniform resource locator to said function (page 5, column 1, [0074] and [0078], and page 9, column 1, [0103]).
- 15. In regard to claim 4, Lennon discloses the metadata describes one or more internal commands associated with said functions (page 5, column 1, [0074]). It is noted that the "get" command described by Lennon is consistent type of internal command exemplified by the instant specification on page 6, lines 1-16.

Application/Control Number: 10/733,559 Page 5

Art Unit: 2168

16. In regard to claim 5, Lennon discloses dynamically generating (page 5, column 1, [0075]) an interpretable format from a mete data description (claim 1) includes building a data structure to inform an operator of a require format for communication with said managed object (page 5, column 2, [0084], to page 8, column 1, [0099]).

- 17. In regard to claim 6, Lennon discloses the interpretable format dynamically interpreting (page 5, column 1, [0075]) response data (claim 92, and page 9, column 1, [0100], to page 10, column 1, line 7).
- 18. In regard to claim 7, Lennon discloses the step of dynamically generating an interpretable format from a mete data description for a function of said object includes an interface such as a graphical user interface (Figures 1 and 2, especial item 101, "Media Browser").
- 19. In regard to claims 8-20, Lennon discloses the above cite method being implemented in a computer system and article comprising a computer-readable signal-bearing medium (Figures 1 and 2).

CONCLUSION

- 20. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:
 - a. Coulthard et al. (US 20040003013A1) as directed to transferring data and storing metadata across a network requiring "a interpretable format" (Abstract etc.).
- 21. Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance.
 Representatives are available to answer your questions daily from 6 am to midnight

Application/Control Number: 10/733,559 Page 6

Art Unit: 2168

(EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.

- 22. For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199. The USPTO's official fax number is 571-272-8300.
- 23. Any inquiry concerning this communication or earlier communications from the examiner should be directed to C. Dune Ly, whose telephone number is (571) 272-0716.
 The examiner can normally be reached on Monday-Friday from 8 A.M. to 4 P.M.
- 24. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tim Vo, can be reached on (571) 272-3642.
